PROFESSIONAL SUMMARY

Dynamic Senior Software Engineer with 9 years of experience delivering scalable, high-impact solutions. Recognized for owning end-to-end projects, driving efficiency, and solving complex technical challenges. Skilled in optimizing processes, streamlining operations, and mentoring engineers to build high-performing teams. Passionate about leveraging technology to deliver measurable value and create innovative, reliable solutions that drive business outcomes, empower teams, and enable organizations to scale efficiently and confidently.

TECHNICAL SKILLS

Languages:	Java (JAVA EE / J2EE), JavaScript, Python, Rust, GraphQL, JPQL
Frameworks:	SpringBoot, Hibernate, ReactJS, Spring MVC, Spring Security
Database:	MySQL, Oracle 12C, DynamoDb, Cassandra, PostgreSQL
Cloud Technologies:	AWS, S3, Terraform, Cloudwatch, IAM, EKS, CDK
Operating Systems:	MacOS, Windows, Linux, Ubuntu
Tools and Utilities:	Maven, Optimizely, Jenkins, Splunk, Macgyver, Kibana, OpsGenie, Nginx
Message Queue Services:	Kafka, RabbitMQ, ZooKeeper, JMS, ActiveMQ

EXPERIENCE

Amazon, Greater Seattle area, WA

October 2023 - Present

Software Development Engineer II ~ Java, Python, Typescript, AWS CDK, Rust, JPA, Maven, React, Node

- Architected a scalable multi-unit ordering solution, cutting merchant costs by 40% driving higher merchant retention.
- Reduced inventory shrinkage by 45% by implementing batch ingestion for ULT virtual receiving, cutting scan time by 32%.
- Designed Evaluation UI that enables engineers to assess CVE vulnerabilities efficiently, reducing evaluation time by 20%.
- Mentored 2 engineers to deliver a regional forecasting initiative, improving planning reliability and reducing cost by 10%.
- Executed the migration of a Tier-1 service from MAWS to NAWS with zero downtime, exceeding reliability targets.
- Built and deployed a team AI chatbot consolidating runbooks, wikis, and on-call guidance, reducing operational lookup time.
- Engineered a high-throughput system handling 500K+ req/sec across 5 external APIs, improving SLA adherence by 22%.
- Accelerated CVE resolution SLA by 30% with tooling for auto-severity, justification, and security dashboard integration.
- Hardened service security by driving timely vulnerability patching across owned services.
- Orchestrated the migration of 15+ services to versioned S3 buckets preventing data loss and achieving zero customer impact.
- Created serverless pipeline for anomaly detection using Lambda + CloudTrail, surfacing 10+ suspicious actions/month.
- Integrated CloudWatch alarms via CDK 5 serverless applications, enabling real-time alerting and reducing MTTD by 65%.
- Engineered AWS resource provisioning using CDK to ensure consistent infrastructure across all environments.

LendingClub Corporation, San Francisco Bay Area, California

November 2020 - October 2023

Senior Software Development Engineer ~ Java, Spring Boot, Hibernate, JPA, Maven, MySQL, Jira, Macgyver, Splunk, Nginx

- Enhanced credit model version and underlying code to persist credit attributes, leading to competitive interest rates and a 30% increase in offer take rate.
- Partnered with an offshore team to streamline the development process, accelerating project outcomes by 10%.
- Designed and implemented third-party vendor integration, reducing manual input by 20% and increasing daily Auto loan approvals by 150.
- Conducted Knowledge Transfer (KT) sessions, promoting shared understanding of Auto Refinance project details and enhancing cross-team collaboration through increased communication and team bonding.
- Expanded Auto refinance product into 7 additional states, resulting in a 15% increase in loan listings and a 10% rise in approvals.
- Drove delivery execution by unblocking engineers and managing dependencies to ensure consistent quarterly goal achievement.
- Led a team of 11 engineers as Scrum Master, ensuring optimal consistency in workflow and performance.
- Integrated two production on-call teams, improving operational efficiency, ensuring seamless transition and minimal disruptions.

Software Development Engineer ~ Java, Spring Boot, Hibernate, JPA, Maven, MySQL, Optimizely, Jenkins, Macgyver, Splunk

- Managed all database operations as team's data champion, enhancing direct mail campaign through execution and maintenance.
- Integrated and tested new Sub Codes for third-party vendors, ensuring system reliability and eliminating potential failures.
- Developed & deployed microservices architecture, Shifting from monolithic datacenter to independent database infrastructure.
- Formulated and assessed an Optimizely A/B experiment for Auto loan applications, elevating the submission rate by 20%.
- Consolidated new credit attributes to enhance Credit Risk Models' decisions, resulting in a 10% reduction in Auto interest rates.
- Implemented automated Vehicle title verification process, replacing manual checks and reducing costs by 60% and time by 50%.
- Designed a new microservice to capitalize on personal loan applications for cross-selling, resulting in a 20% increase in auto refinance loan applications.
- Collaborated with the team to develop a vehicle history score, enabling Credit Specialists to assess the value of associated auto-refinance vehicles.

Harvest Savings and Wealth Technology Solutions, San Francisco, California**August 2019 – November 2020***Software Engineer (Java Developer) ~ Java, Spring, Hibernate, JPA, Maven, MySQL, Wercker, OWASP-ZAP, Jmeter, groovy*

- Developed Mock-Bank, an automated file delivery and consumption application, effectively replacing the bank's core system.
- Engineered API-Docs, an interactive demonstration tool for clients, simplifying sales processes for a newly released product.
- Orchestrated Spring Boot microservices in Docker containers and Amazon EC2 instances using Jenkins, ensuring efficient and scalable service delivery.
- Formulated a dynamic file upload process to S3 based on specifications, reducing the need for manual editing and loading.
- Crafted Time-Machine service, a testing library enabling simulation of future and past events triggered by scheduled jobs.
- Conducted penetration tests using OWASP-ZAP to identify and mitigate vulnerabilities across all environments and platforms.
- Architected and executed comprehensive load testing on API infrastructure utilizing JMeter, ensuring optimal performance.

Queens and Future Queens, Plano, Texas**June 2018 - June 2019***Software Engineering Intern (Full-stack Developer) ~ J2EE, MySQL, JDBC, Spring MVC, Maven, Hibernate.*

- Developed and Integrated Carousel display and recommendation engine to enhance E-commerce website.
- Analyzed and fixed bugs working with the team, increased user traffic by 15%, hence increasing the number of daily active users.
- Designed visual documentation using Prezi software, helping the team to understand the project easily.
- Engineered Restful Web Services to facilitate seamless JSON data transfer between two interfaces, optimizing communication.
- Implemented checkout processes integrating payment gateways enhancing user experience and increasing transaction efficiency.

Techno Cronies Software Solutions, Nagpur**June 2016 - June 2017***Software Engineer (J2EE Developer) ~ Java, HTML5, Hibernate, CSS3, JavaScript, MySQL, Bootstrap.*

- Improved performance of Java based applications by optimizing the number of server calls reducing response time by 20%.
- Revolutionized a user interface, transforming it into an interactive masterpiece, and met a demanding deadline of just 6 weeks.
- Directed a technical team of two, providing guidance and ensuring the implementation of source code adhered to standards.
- Implemented automation solutions to streamline manual data loading processes, resulting in a weekly labor-hour savings of 15.
- Delivered successful user acceptance testing for two web-based applications, ensuring functionality and user satisfaction.

PROJECTS**Hawk-Aide Application (Software Engineering-1) ~ Spring MVC, JDBC, LucidChart and MySQL, Bootstrap.****2018**

Developed a web-based application that assists students for managing and controlling resources like library, courses. Introduced panic keys which helped students to take them out of avoidable tragic situations. Designed class diagram and ER-diagram to understand the application model and data model.

Smart-Portables (Enterprise Web Application) ~ JSP, Servlets, MySQL, Google Visualization, MongoDB, Ajax, JavaScript.**2017**

Implemented a web-based application, a retailer website from where clients can buy electronic products. Worked as a backend engineer developing Servlets and JSP pages. Reduced redundancy and improved performance by optimizing SQL scripts. Designed ER-diagrams and class diagrams for documentation using SmartDraw tool.

PUBLICATIONS AND ADDITIONAL ACHIEVEMENTS

- Co-Authoring an International paper on "[Wireless Audio Switching and Transmission System for Public Address](#)" at journal IJRET.
- Achieved 2nd prize in the national level competition "Explore 5.0" with a presentation titled 'LI-FI: The Smart Internet'.
- Secured 1st place in the national competition 'ZHEP14' on the topic "Project Loon: Balloon powered Internet for all" by Google.
- Effectively spearheaded numerous technical events as Branch Head of **Indian Society for Technical Education** for two years, demonstrating adaptive leadership and organizational prowess.
- Volunteered with the National Service Scheme technical for 2 years, contributing to the **Swaccha Bharat Abhiyan**.
- Secured 2nd position at national competition 'TECHNOPATI' based on implementation of innovative circuits.

EDUCATION**Humphreys University, Stockton****Sept 2024***Master of Business Administration in Information Technology***Illinois Institute of Technology, Chicago****May 2019***Master of Science in Computer Science***St. Vincent Pallotti College of Engineering and Technology, Nagpur****June 2016***Bachelor of Engineering in Computer Science*
